

# Agriculture and Food

## GMO Rejection on the Rise

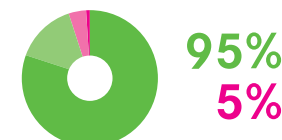

In the current German environmental awareness study conducted in 2019, 95 percent of respondents are in favour of labelling genetically modified food.

The use of genetically modified organisms in agriculture should be prohibited.

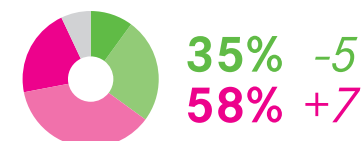

If plants are genetically modified using the new techniques, possible effects on nature should always be examined.\*

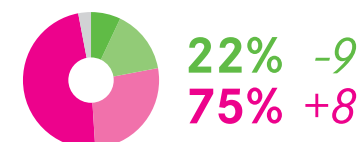

I think that humans have no right to selectively genetically modify plants and animals.

I believe that genetic engineering in agriculture is an important component of the global fight against hunger.

I have no problem with eating genetically engineered food.

● completely agree  
● somewhat agree

● completely disagree  
● somewhat disagree
